You are given an integer n denoting the number of cities in a country. The cities are numbered from 0 to $n - 1$.

You are also given a 2D integer array `roads` where `roads[i] = [ai, bi]` denotes that there exists a **bidirectional** road connecting cities `ai` and `bi`.

You need to assign each city with an integer value from 1 to n , where each value can only be used **once**. The **importance** of a road is then defined as the **sum** of the values of the two cities it connects.

Return the **maximum total importance** of all roads possible after assigning the values optimally.

Example 1:

```
graph LR; 0 --- 1; 0 --- 2; 1 --- 0; 1 --- 2; 1 --- 3; 2 --- 0; 2 --- 1; 2 --- 3; 2 --- 4; 3 --- 1; 3 --- 2; 4 --- 2;
```

Input: `n = 5, roads = [[0,1],[1,2],[2,3],[0,2],[1,3],[2,4]]`

Output: 43

Explanation: The figure above shows the country and the assigned values of `[2,4,5,3,1]`.

- The road `(0,1)` has an importance of `2 + 4 = 6`.
- The road `(1,2)` has an importance of `4 + 5 = 9`.
- The road `(2,3)` has an importance of `5 + 3 = 8`.
- The road `(0,2)` has an importance of `2 + 5 = 7`.
- The road `(1,3)` has an importance of `4 + 3 = 7`.
- The road `(2,4)` has an importance of `5 + 1 = 6`.

The total importance of all roads is `6 + 9 + 8 + 7 + 7 + 6 = 43`.

It can be shown that we cannot obtain a greater total importance than 43.

Example 2:

```
graph LR; 0 --- 3; 1 --- 3; 2 --- 4;
```

Input: `n = 5, roads = [[0,3],[2,4],[1,3]]`

Output: 20

Explanation: The figure above shows the country and the assigned values of `[4,3,2,5,1]`.

- The road `(0,3)` has an importance of `4 + 5 = 9`.
- The road `(2,4)` has an importance of `2 + 1 = 3`.
- The road `(1,3)` has an importance of `3 + 5 = 8`.

The total importance of all roads is `9 + 3 + 8 = 20`.

It can be shown that we cannot obtain a greater total importance than 20.

Constraints:

- $2 \leq n \leq 5 \times 10^4$
- $1 \leq \text{roads.length} \leq 5 \times 10^4$
- `roads[i].length == 2`
- $0 \leq a_i, b_i \leq n - 1$
- $a_i \neq b_i$
- There are no duplicate roads.
